- Processor: Pentium 3 or better
- Available Hard Disk space: 200 MB
- RAM: 512 MB
- Administrative Privileges
- Broadband or Dial-up Internet connection

Windows 95, Windows 98, Windows ME: Not Supported

MacOS: Not Supported

Linux Operating Systems: Not Supported

SecureIT Plus Frequently Asked Questions

Q: Why do I need SecureIT Plus?

A: Without computer protection, you are susceptible to computer damage, financial loss, or both because of a computer virus or spyware that sneaks onto your computer. In a recent issue of Consumer Reports, they reported that if you use the Internet at home you have a 1-in-3 chance of being negatively affected by computer viruses or spyware.

As a subscriber to SecureIT Plus, you will no longer have to worry about your anti-virus protection, Spyware protection, or anything else related to the privacy of your information or the protection of your computer. SecureIT Plus also automatically applies Microsoft patches after testing them to ensure continued protection. In addition, the service will also provide ongoing maintenance by optimizing file storage and disk defragmentation for faster PC performance.

Q: Do I need SecureIT Plus if I have Norton/McAfee/other anti-virus protection on my computer?

A: Excellent! We love to see that you have taken the time to protect your computer from Internet security issues. SecureIT Plus will give you the same protection and more.

A recent survey conducted by the National Cyber Security Alliance found that the majority of computer users did not have their anti-virus protection installed correctly or did not have it updated. SecureIT Plus is fully automated. We will install it for you and once installed, you don't have to manage the software to make sure your protection stays updated. With Norton or McAfee you must install, maintain, and make sure the service stays updated. With SecureIT Plus it is taken care of for you automatically.

In addition, besides up-to-date protection from spyware, viruses, and other malicious programs, SecureIT Plus will automatically keep your system current with critical patches to your Microsoft operating system. Most people don't understand patches, let alone take the time to stay current. Yet, without these patches your computer and/or network can easily be compromised. In addition,

the service will also provide ongoing maintenance by optimizing file storage and disk defragmentation for faster PC performance. These services are not included with Norton and McAfee anti-virus protection software.

Support for SecureIT Plus is free and the service is guaranteed. If you experience problems with an Internet-delivered issue while using SecureIT Plus, we will fix your computer free of charge. With Norton and McAfee you pay for support calls, and if you experience problem with an Internet-delivered issue, you will pay to receive assistance.

Q: It seems more expensive, why?

A: To get the same protection from Norton, McAfee, or another company you will have to purchase multiple programs. SecureIT Plus is actually priced about the same as if you were going to buy Norton Internet Security or other similar products. With SecureIT Plus you get it all in one service, and you don't have to maintain and update it.

Q: Will you (or someone else) have access to my computer if I use SecureIT Plus?

A: Absolutely not. SecureIT Plus was built with your security and privacy as first priority. All the updates, scanning, and protection happen from your computer and nothing is sent to us outside of the reporting statistics which are made fully available to you on our reporting Web site and through our month e-mail summary. The only time we have access to your machine is when you explicitly grant it to us during your use of the Remote Installation or Remote Support request. Even then we require that you put in a one time use code that allows your computer to connect to our Operation Center granting us permission to assist you.

Q: Do I still have to have a separate Anti-virus program?

A: No, the SecureIT Plus service will provide you with everything you need to safely navigate the Internet and effectively and efficiently use your computer.

Q: Is there anything that I need to do to keep things updated?

A: No, the value of this service is that it applies all updates and runs all of its various scans behind the scenes without you having to worry.

Q: Do I have to leave my computer on all of the time?

A: No, if you happen to have your computer off at the time the program runs its various scanning processes and updates, they will automatically run the next

Q: How do I know that I am being protected?

A: You will receive a monthly e-mail detailing the activities that have been executed by your SecureIT Plus software. In addition you can check the Online Reports anytime, which are updated every 24 hours.

Q: What if I have have/use a firewall?

A: Since our service never contacts your computer, and the vast majority of firewalls are designed to block INCOMING traffic, this software is compatible with 99+% of all firewalls.

Q: What happens if I get a virus or some type of Spyware on my computer?

A: In the very unlikely case that you do get a virus or spyware threat on your computer we will do our best to remove the problem at no cost.
